

Milkiwean

# Feeder

Suitable for  
Milkiwean  
BabyMilk  
and Precoce

## A practical management tool for very young and light piglets (from 3 kg)

- ◆ Improves the feed intake of your piglets
- ◆ Gives an excellent start of small weaned piglets
- ◆ Takes care of 25-30 piglets at once
- ◆ Flexible installation in the nursery
- ◆ Presented fresh feed stimulates regular feed intake
- ◆ Hardly any wastage

An adapted feeding system with BabyMilk and Precoce in combination with the Milkiwean Feeder offers the optimal solution to rear light piglets.

By feeding small quantities at regular intervals the natural suckling/feeding behaviour of piglets is imitated. This stimulates higher feed intake and supports a good functioning of the digestive system. This has a clear positive effect on the weight of the piglets.

#### How to use the Milkiwean Feeder:

- Use Milkiwean BabyMilk as feed in the Milkiwean Feeder (weaning before ten days old) or Milkiwean Precoce (weaning after ten days old).
- Mash or crumbled feed can be applied in the Milkiwean Feeder
- With the water supply you can determine the texture of the gruel. The feed should flow gently like thick cream into the trough.

#### RECOMMENDED FEED TIME

day 1	10 min/hour
day 2	10 min/hour
day 3	15 min/hour
day 4	20 min/hour
day 5	25 min/hour
day 6	30 min/hour

#### Advise:

- Make sure that the trough is empty at the end of the feed time. If not, reduce the time.
- Start from day six with supplying dry feed next to the Milkiwean Feeder. This enhances a smooth transition to the weaning feed.
