

Milkiwean

Granito

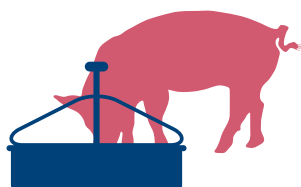

Weaning feed
>6 kg

For a smooth transition from farrowing to nursery

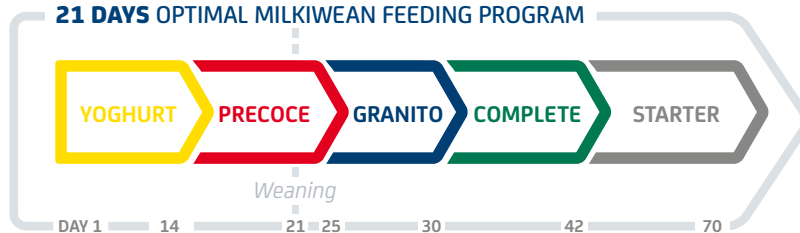

- ◆ Maintains and safeguards high feed intake
- ◆ Stimulates a smooth transition from pre-weaning to weaning feed
- ◆ Especially designed for the development of the gastro-intestinal tract of piglets with a weaning weight of >6 kg
- ◆ For more uniform litters
- ◆ High palatability and digestibility

Milkiwean Granito is part of the optimal Milkiwean feeding program.

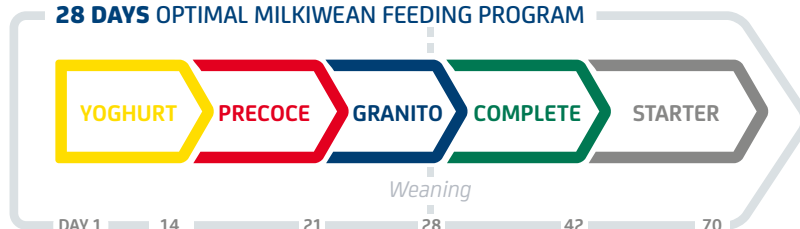

LIFESTART SETS LIFE PERFORMANCE

21 DAYS OPTIMAL MILKIWEAN FEEDING PROGRAM

28 DAYS OPTIMAL MILKIWEAN FEEDING PROGRAM

Milkiwean Granito in combination with Milkiwean Yoghurt and Milkiwean Precoce is the optimal Milkiwean pre-weaning program for total piglet performance.

What is Milkiwean Granito?

- Milkiwean Granito is a weaning feed in mash, crumble or pellet.
- Good quality proteins help to support a good functioning of the digestive system and villi development in the first week after weaning.
- The appealing fruit aroma helps to optimise the feed intake during the first week after weaning: fundamental for high piglet performance.

How to use Milkiwean Granito?

When weaning at 21 days:

- As a smooth transition from weaning feed to starter feed.
- Aim for an average feed intake of 800/1000 gr per piglet after using Milkiwean Precoce (day 25 until day 30)

When weaning at 28 days:

- As a smooth transition from pre-weaning to weaning feed.
- Aim for an average feed intake of 250 gr per piglet before weaning.

For both programs applies:

- Piglets prefer a piglet bowl that allows groups of piglets to eat at the same time.
