The Facts Rats and Mice cause severe

economic losses in piggeries if they are left uncontrolled. Physical losses from consumption of feed and transfer of disease to hidden losses such as eroding insulation and causing electrical and communication failures around the Unit. Rats and Mice are now moving indoors and welcome the warm environment provided by the piggery with an abundant food supply.

Priority should be given to assessing existing bait control programmes on units and replacing existing bait points and/or adding new ones with functional, easy to monitor bait points that help you monitor the level of rodent activity in key areas and which will focus control strategies where they are needed.

Sorex Fortec Technology

The key to effective rodent bait use is to deliver a lethal rodenticide dose to as many rats and mice as possible as quickly as possible, thereby helping to safeguard other wildlife. Sorex has developed new FORTEC technology which dramatically increase the rate of uptake. It is based on the principal that Rats & Mice will consume more of any foodstuff more rapidly if it possesses a variety of different looks, feels, tastes & Smells. This principle is combined in the NEOSOREXA GOLD product with kibbled grain to increase the surface area of poison and preventing mice from avoiding the treated shells typically associated with whole grain baits.

Order your bait requirements now and avail of this special offer.

SOREX WIDE PIPER:

The tube provides the sheltered environment in which rodents, essentially shy creatures, prefer to feed. The clear gravity feed tube provides an instant visual assessment of bait take. Narrow entrances at each end of the tube discourage non-target species such as birds from entering and prevent spillage from the tube. Ideal for use with Neosorex Gold

A SOREX RATBOX XTRA:

The Ratbox Xtra can accommodate a rat trap and bait blocks, it can be kept securely in place by using the optional fixing bars (included). The Ratbox Xtra design ensures bait is kept as dry as possible. It is easy to use and comes with a baiting sticker to record your baiting activity. Can be used with all formulations
